

*Effectively trained crane operators and daily inspections save time, money and lives. Inexperienced operators may cause unnecessary accidents that can put everyone at risk. The best way to prevent accidents is to make sure only trained and competent employees operate the crane and that the crane is inspected and maintained by an experienced operator.*

ProservCrane Group operator and safety training courses are designed specifically for crane operators and plant supervisory personnel who are responsible for overhead crane safety. Both experienced and novice operators will benefit from information concerning crane fundamentals for overhead and jib cranes. Additionally, our courses provide maintenance and production managers with an overview of the maintenance practices necessary to ensure maximum productivity from lifting equipment.

ProservCrane Group is committed to achieving excellence training for your company associated with crane operator safety. We help personnel build their skill and confidence in performance and easy or high level lifts in changing and complex conditions. Specialized on-site training courses are offered and regularly conducted on-site at customers work locations throughout the nation.

### **What You Can Expect:**

#### **1. Customized Training**

- Operator Training Programs to meet your specific equipment and regulatory codes

#### **2. Flexible Schedule** - Your schedule is our Schedule

- 1st, 2nd or 3rd shift
- We provide training where your schedule permits
- Need 2 to 3 weeks notice for scheduling

#### **3. Cost Effective**

- On-site courses are a great value when only a few employees require training
- Avoid costly expenses and per diem costs, airline tickets and additional employee absence from their work location

#### **4. Expert Field Experienced Instructors**

- ProservCrane Group instructors have extensive crane operator service knowledge.

After completing the course, operators and trainers will be better equipped to identify major crane components, understand the rules of safe crane operation and become familiar with the proper techniques to minimize load swing.
